FOR IMMEDIATE RELEASE

Waypoint 2 Space to Launch SPWAY, the World's First Commercial Space Utility Token

July 20 launch will connect blockchain technology with real-world astronaut training, Space Experiences, education and the emerging commercial space economy

HOUSTON, Texas — July 17, 2026 — Waypoint 2 Space today announced the upcoming launch of SpaceWay Token (SPWAY), believed to be the world's first utility token created specifically to serve a real-world commercial space ecosystem.

SPWAY is scheduled to launch on July 20, 2026, exactly 57 years after the Apollo 11 lunar module landed on the Moon and humanity took its first steps on another world.

Apollo 11 demonstrated what could be accomplished when innovation, vision and determination came together around a bold mission. SpaceWay builds upon that legacy by creating a new way for people around the world to participate in the next era of commercial space.

"On July 20, 1969, Apollo 11 opened the door to human exploration of another world," said Kevin Heath, Founder and CEO of Waypoint 2 Space. "Fifty-seven years later, we are launching SpaceWay to help open another door—one that allows average people all over the world to experience, participate in and become part of the growing commercial space economy."

Unlike cryptocurrencies that use space-related names or imagery without a direct connection to commercial space operations, SPWAY was created as the utility token of the Waypoint 2 Space ecosystem.

Waypoint 2 Space is a Houston-area commercial space company developing astronaut-inspired Space Experiences, educational programs and commercial spaceflight training. Waypoint is the only company in the world to hold FAA safety approvals for four spaceflight training programs to train the general public, STEM students, crew members and spaceflight participants.

SPWAY is designed to connect token holders with real-world and digital utility throughout the expanding Waypoint 2 Space ecosystem. Planned uses include:

- Astronaut-inspired Space Experiences
- Commercial spaceflight training programs
- Memberships and loyalty rewards
- VIP events and exclusive access
- STEM and educational programs
- Merchandise, services and future partner offerings
- Additional utility introduced as the ecosystem expands

"SpaceWay is not a token that was created first and then given a space-themed story," Heath said. "It was built around an established commercial space company, a defined ecosystem and real-world programs that people will be able to experience."

Connecting Digital Utility With a Real-World Space Destination

Waypoint 2 Space is developing a planned 35,000-square-foot Space Experience Center in the Houston area near NASA's Johnson Space Center.

The company is currently raising $10 million to advance the development of its first center, which is expected to combine immersive public Space Experiences with astronaut-inspired activities, STEM education, corporate programs and FAA-approved commercial spaceflight training.

Waypoint 2 Space is currently a pre-revenue company focused on raising capital, developing its first facility and expanding the programs and partnerships that will support future operations.

SPWAY is intended to provide a digital participation and utility layer connecting people with Waypoint 2 Space programs as the company moves through development and into operations.

A New Category of Utility Token

The cryptocurrency market includes projects that reference satellites, planetary exploration, space data, space-themed entertainment and other space-related concepts. However, Waypoint 2 Space has not identified another utility token created to support the complete ecosystem of a real-world commercial human-spaceflight training and Space Experiences.

For that reason, the company is introducing SPWAY as the world's first commercial space utility token.

The distinction is central to the SpaceWay model. SPWAY is not intended merely as a cryptocurrency associated with the idea of space. It is designed to deliver utility connected to commercial spaceflight preparation, immersive experiences, education, memberships, rewards and future commercial partnerships.

As private companies expand humanity's access to space, Waypoint 2 Space believes blockchain technology can provide new ways for individuals to engage with the industry long before they personally travel beyond Earth.

Launching on the Anniversary of Apollo 11

Apollo 11 landed on the Moon on July 20, 1969, before astronauts Neil Armstrong and Buzz Aldrin became the first humans to walk on another celestial body.

Waypoint 2 Space selected the July 20 launch date to recognize the legacy of Apollo while emphasizing the transition from an era in which only a select few could participate in spaceflight to a future in which commercial companies can make space-related experiences more accessible to the public.

"Apollo inspired the world to look up," Heath said. "SpaceWay is designed to give people a meaningful way to take part in what comes next."

The SPWAY smart contract has been deployed on the Ethereum network, and the company has completed an independent third-party smart contract security audit. SPWAY has a fixed maximum supply of 2 billion tokens.

Additional launch information, token details and participation instructions are available at SpaceWayToken.com.

About Waypoint 2 Space

Waypoint 2 Space is a commercial space company dedicated to making the experience of space more accessible through astronaut-inspired Space Experiences, STEM education and FAA-approved commercial spaceflight training.

The company is developing Space Experience Centers that will combine immersive public attractions with professional training programs, corporate experiences and educational opportunities designed to connect more people with the future of human spaceflight.
